Email:- adhishadhish547@gmail.com ◇ [LinkedIn:- Adhish V](#)

OBJECTIVE

Passionate and detail-oriented Embedded Systems Engineer with hands-on experience gained through the Emertxe Certified Embedded Professional program. Skilled in C programming, microcontroller interfacing, and real-time system development. Seeking an entry-level opportunity to apply technical expertise, contribute to embedded product development, and grow within a dynamic engineering environment.

EDUCATION

B Tech in Electronics and communication engineering, APJ abdul kalam technological university 2022-2025
Diploma in Electronics Engineering, EKNM Goverment Polytechnic college Trikaripur 2019-2022

TECHNICAL COURSE

Emertxe Certified Embedded Professional [ECEP] 2025

SKILLS

Technical Skills

- Strong proficiency in C and C++ programming for embedded applications, including memory management and pointer operations.
- Hands-on experience with microcontrollers (ARM, PIC, and AVR) and interfacing peripherals such as UART, I2C, SPI, and GPIO.
- Good understanding of Embedded Linux concepts such as boot process, file systems, cross-compilation, and shell scripting.
- Experience in using debugging tools like GDB, DDD, and serial terminals for testing and troubleshooting embedded software.
- Familiar with real-time concepts such as task scheduling, interrupt handling, and inter-process communication.
- Knowledge of device drivers, kernel modules, and hardware abstraction layers.
- Practical experience with build systems and compilers (GCC, Makefile, CMake) and version control tools (Git, GitHub).
- Exposure to data structures and algorithms implementation in C/C++ for performance optimization.
- Basic knowledge of operating system concepts and process management in Linux.
- Familiar with using IDEs such as Keil µVision, Code::Blocks, and Arduino IDE for development and simulation.
- Comfortable working with hardware debugging tools like logic analyzers and oscilloscopes.

Soft Skills

- Problem-solving – Strong analytical ability in debugging both software and hardware-level issues.
- Adaptability – Quick learner with the ability to grasp and implement new tools and technologies efficiently.
- Teamwork – Collaborative experience working on multi-person embedded projects.
- Communication – Effective at conveying technical information clearly through documentation and presentations.
- Time management – Capable of handling multiple development and testing tasks within deadlines.

PROJECTS

- **Image Steganography** Developed a BMP steganography tool in C that hides and retrieves secret files inside a 24-bit BMP image using the Least Significant Bit (LSB) technique. Implemented bitwise operations, file parsing, and CLI-based encoding and decoding. [GitHub link](#).
- **Lexical Analyzer** Implemented a lexical analysis tool in C to tokenize source code into identifiers, keywords, operators, and delimiters. Used a deterministic finite automata (DFA), managed file input/output, and added error detection for invalid tokens. Available at [GitHub](#).
- **MP3 TAG Reader** Created a command-line application in C to read, display, and modify ID3v2 tags in MP3 files. Focused on file structure analysis, data extraction, and efficient string handling. [GitHub link](#).
- **Digital Parking Management System** Developed a C-based command-line system to manage vehicle parking, including slot allocation, vehicle search, time-based fee calculation, and persistent data storage using file handling. Implemented structures, time.h functions, dynamic slot management, and a menu-driven interface. [GitHub link](#).
- **File Encoder** Built a command-line encryption and decryption tool in C using an XOR-based cipher with a repeating key. Designed to ensure data security and demonstrate low-level bitwise manipulation. [GitHub link](#).
- **Library Management** Implemented a Library Management System in C using structures and file handling to manage book records. Supports operations like adding, searching, issuing, and returning books. [GitHub link](#).
- **Address Book** Designed a console-based Address Book in C that enables adding, searching, editing, and deleting contact details stored in a CSV file. Emphasized file handling and user-friendly CLI interaction. [GitHub link](#).

EXTRA-CURRICULAR ACTIVITIES

- **Project Leadership:-** Served as the Project Leader for the B.Tech final year project, managing task allocation, technical development, and team coordination to ensure successful project completion.
- **Technical Participation:-** Actively participated in embedded system workshops and coding sessions as part of the Emertxe training program.

LEADERSHIP

- B.Tech Final Year Project Leader
- Diploma Final Year Project Leader

PERSONAL INFORMATION

- **Date of birth :** 22/05/2002
- **Languages known :** English, Malayalam, Tamil
- **Sex :** Male
- **Martial status :** Unmarried

DECLARATION

I hereby declare & confirm that the above stated information is true to the best of my knowledge & belief.
